

## Invitation to webcast: Azelio presents the broader use of its unique energy storage technology

Azelio's energy storage solution with dispatchable electricity production around the clock has been adapted to solar regions in areas where the electricity grid is either unstable or entirely lacking. With a new important development Azelio has broadened the range of uses of its unique technology, so that electricity from a wider range of renewable sources can be received and stored as thermal energy. This opens a global market where Azelio can improve the productivity of both existing and planned installations.

Are you interested in learning more about Azelio, the company strategy, recent progress and its unique technology that enables production of renewable electricity on demand to a low cost, all hours of the day?

On **Monday June 17th at CEST 15.00 – 15.45**, Jonas Eklind, CEO of Azelio, will hold a presentation open to investors and others interested in the company. There will be time for questions. The presentation will be given in English.

**Register for the webcast here:** <https://bit.ly/2lhPvEo>
